EDUCATION

Brigham Young University, Ira A. Fulton College of Engineering

Apr 2028

Bachelor of Engineering, Cybersecurity

Provo, UT

- GPA: 3.43/4.00
- Full tuition academic scholarship recipient
- Certifications: CompTIA Security+

SKILLS

Security: CrowdStrike Falcon, Nmap, Group Policy hardening, Defender Firewall, FIDO2/WebAuthn, OSINT

Identity and Access: Microsoft Entra ID, Active Directory, Arista AGNI

Systems Administration: Windows Server, Linux administration, Jamf, ManageEngine, FOG imaging

Cloud and Infrastructure: AWS EC2, VMware, Proxmox, Docker, GitLab administration

Networking: Cisco IOS CLI, VLANs, subnetting, firewall rules, port forwarding

Programming: Python, PowerShell, C/C++, Bash, JavaScript

EXPERIENCE

TaxHawk

Feb 2026-Present

IT Support Specialist Intern

Provo, UT

- Resolve ~15 hardware, software, and access tickets weekly for 500 employees, minimizing downtime
- Administer Jamf and Arista AGNI to remotely fix Mac account and network access issues
- Developed a GitLab-integrated database access request form, speeding up company-wide approvals
- Automated NOC dashboard authentication with Python, keeping monitoring live without manual logins

BYU Internet Security Research Lab

May 2026-Aug 2026

Research Assistant

Provo, UT

- Tested 3+ downgrade and social engineering attacks against FIDO2 passkeys in Chrome and Firefox, including forcing fallback to password login
- Drafted 8+ defenses for FIDO2 attacks, contributing to an in-progress research paper

BYU College of Engineering

Oct 2024-Feb 2026

Windows System Administrator, Part-time

Provo, UT

- Administered 200+ Windows endpoints with CrowdStrike Falcon, maintaining college-wide coverage
- Built FOG deployment images for 200+ machines, cutting lab machine setup time
- Cut open vulnerabilities 80% in 6 months as an IT Security Council member by deploying CrowdStrike Falcon fleet-wide and driving patch remediation to closure

PROJECTS

- Scanned an enterprise network with Nmap under authorization, identifying and reporting unused services such as RDP on port 3389 to reduce attack surface
- Hardened a Windows 10 base image with Group Policy, disabling SMBv1 and enforcing account lockout thresholds to defend against ransomware spread and brute-force attacks
- Deployed a Raspberry Pi proxy server with custom filtering rules alongside firewall and port forwarding configuration, blocking unwanted content across a home network
- Built a Python Flask CTF challenge with an intentional SQL injection flaw and a multi-step path through MD5 hashing and RSA decryption, giving students hands-on web and crypto exploitation practice

COMMUNITY INVOLVEMENT

Member, BYU Cybersecurity Student Association

Sep 2024-Present

- Compete in 2+ CTF competitions yearly, specializing in OSINT and cryptography challenges

Member, BYU Network Engineering Club

Sep 2024-Present

- Installed and administered virtual machine networks on Proxmox with 3 operating systems, gaining real-world experience in network design and administration
